Summary

Fresh .NET Back-End Developer with hands-on experience building RESTful APIs using ASP.NET Core, Clean Architecture, and Entity Framework Core. Graduated with GPA 84% and completed a 120-hour diploma at Route Academy. Seeking a Junior Back-End Developer role to grow within the .NET ecosystem.

Education

Menofia University – Faculty of Science (Physics & Computer Science) | Class 2021–2026 | GPA: Very Good (84%)

Bachelor Thesis: Kon Sanad Charity Management System (*Grade: A+*)

Projects

1. Gym Management System (ASP.NET MVC | Route Academy)

- Full-stack web app using 3-Tiers Architecture, Generic Repository Pattern, Identity-based Auth, and role-based dashboards for admins/members with session scheduling and subscription management.
- Built a session booking system where members can book sessions, trainers can mark attendance or cancel bookings, all backed by a service layer with Repository and Unit of Work patterns.
- Set up role-based authentication (Admin/Trainer/Member) using ASP.NET Core Identity, with AutoMapper for mapping data between models and views, and fixed several EF Core migration and seed-data issues along the way.
- Repo : <https://github.com/Islam3mar/GymSystemMVC.git>

2. E-Commerce RESTful API (ASP.NET Core | Route Academy)

- Production-ready API with Onion Architecture, AutoMapper, JWT Auth, Redis Caching, Stripe Payment, Swagger docs, SOLID Principles, Unit of Work, and Fluent Validation.
- Added a caching layer with Redis to speed up product data retrieval, and built a flexible filtering/sorting/pagination system for products and orders using the Specification pattern.
- Implemented secure user login with JWT authentication, and integrated Stripe to handle online payments during checkout.
- Repo : <https://github.com/Islam3mar/ECommerceAPI.git>

3. Kon Sanad Charity Management System (ASP.NET Core Web API | Graduation Project)

- Role-based API for 5 roles (Manager, Volunteer, Beneficiary, Donor, Admin) with Clean Architecture, JWT Auth, background notifications, donation pipelines, warehouse management, and KPI dashboard.
- Built a real-time notification system using SignalR combined with Redis, along with a background job that automatically checks campaigns nearing their end date and notifies managers, volunteers, and donors.
- Developed a PDF reporting module for donors, donations, and beneficiaries, powering a dashboard with key statistics, on top of a role-based API (Manager/Volunteer/Donor/Beneficiary) secured with JWT.
- Repo : <https://github.com/ahmed-samir10/GraduationProject.git>

Internships & Trainings

Back-End Development Diploma (.NET Track), Route Academy (120 Hours | Dec 2025 – Jul 2026)

- Completed an intensive diploma covering the full .NET back-end stack (C#, OOP, LINQ, SQL Server, EF Core, ASP.NET MVC & Web APIs), applying SOLID Principles, Design Patterns, and Agile methodology with Azure DevOps through hands-on projects (see Projects section).

Additional training:

Web Development – CaptainDev, Intro to Programming & OOP – CaptainDev (2022), AWS Academy Cloud Foundations, Data Structures & Algorithms.

Technical Skills

Languages: C#, SQL, CSS, JS

Frameworks & Libraries: .NET Core, ASP.NET Web API, Entity Framework Core, AutoMapper, Fluent Validation, Fluent API

Tools: Visual Studio, Postman, Swagger, Git, GitHub, SSMS, Azure DevOps

Concepts: OOP, Clean/Onion Architecture, Repository Pattern, RESTful APIs, JWT Auth, Microsoft Identity, SOLID, Unit of Work, LINQ

Testing: API Testing (Postman, Swagger), Manual Testing

Languages

Arabic: Native **English:** Professional working proficiency
